DETAILED ACTION

Response to Amendment

1. Acknowledgment is made to the amendment filed on 6/24/2009.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bing Ai on Wednesday, November 04, 2009.

The application has been amended as follows:

Please CANCEL claims 25 and 26.

Claim 27:

--A method comprising:

directing an aerosol flow through a cloud condensation nuclei chamber to grow particles due to condensation from supersaturation; and
controlling a temperature profile of the cloud condensation nuclei chamber along the aerosol flow to produce a nearly constant supersaturation along the cloud condensation nuclei chamber;
wherein a temperature of the cloud condensation nuclei chamber increases monotonically along the direction of the aerosol flow.—

Allowable Subject Matter

3. Claims 1-7, 9-16, 18-24 and 27-50 are allowed.
4. The following is an examiner's statement of reasons for allowance:

As for claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious a CCN chamber vertically arranged to receive aerosol flow from the top and flows downward along the direction of gravity to the outlet engaged to a thermal control to produce a monotonic thermal profile and a monotonic temperature gradient in a stream-wise direction of the aerosol flow from the input to the output of the CCN chamber, in combination with the rest of the limitations of the claims.

As for claim 9, the prior art of record, taken alone or in combination, fails to disclose or render obvious a CCN measuring apparatus having a chamber vertically arranged to receive aerosol flow from the top and flows downward along the direction of gravity to the outlet engaged to a heating system to produce a linearly increasing temperature gradient along the axis of the chamber in the direction of flow and a monotonic thermal profile in a stream-wise direction of the aerosol flow to effectuate a nearly constant temperature along the chamber, in combination with the rest of the limitations of the claims.

As for claim 19, the prior art of record, taken alone or in combination, fails to disclose or render obvious a thermal gradient diffusion chamber for inclusion in a CCN measurement apparatus wherein a flow control mechanism coupled to the CCN column to direct the sheath flow to flow along inner surfaces of the CCN column to keep the aerosol flow away from the inner surfaces, a humidifier to control the humidity in the sheath flow, and a heat source to create an increasing

temperature gradient and a monotonic thermal profile in the direction of flow of the aerosol flow in the chamber, in combination with the rest of the limitations of the claims.

As for claims 22 and 27, the prior art of record, taken alone or in combination, fails to disclose or render obvious a system and method for conditioning a sample in a CCN measuring apparatus, by subjecting a sample through the CCN column such that the increasing temperature gradient in the direction of the sample flow and a monotonic thermal profile in a stream-wise direction of the sample flow to produce a substantially supersaturation, in combination with the rest of the limitations of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid proceeding delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statements of Reasons for Allowance."

Cited Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schildmeyer et al. (U.S. Patent No. 5,675,405) teaches a system and method for measuring particles in a CCN by employing supersaturation due to temperature control.
